PROJECTS

Project Phoenix — Local-First AI Operating System

2025 – Present

Personal Project | github.com/singhgurkirat07

- Built a fully modular local-first AI assistant with FastAPI backend, React/TypeScript frontend, and local LLM execution via Ollama
- Implemented complete browser automation engine using Playwright — supports navigation, click, type, form fill, keyboard events, screenshots, and content extraction
- Multi-tab browser management with persistent session handling, context isolation, and shared browser instance architecture
- Designed 10+ frontend pages (Chat, Browser, Knowledge, Memory, Productivity, Email, Calendar, Notes, Tasks, Projects, Tools, Settings) using React + Tailwind CSS
- Architecture: User → React Frontend → FastAPI Backend → Playwright Browser → Web; next evolution adds LLM → Planner → Tool Registry layer
- Tech: Python, FastAPI, AsyncIO, Playwright, Pydantic, React, TypeScript, Tailwind CSS, Vite, Ollama, SQLite, Electron, Git
- Overall completion: ~45-50% | Core infrastructure 100% | Browser system 100% | AI infrastructure 40% | Agent intelligence 10%
